08/2021 - Present

Backend Developer

Developed and maintained scalable backend systems using [specific technologies such as PHP, Laravel, ReactJS, etc.].

Designed and implemented RESTful APIs and integrated them with frontend applications.

Optimized database performance and wrote complex queries using SQL/NoSQL databases such as MySQL, MongoDB etc.

Implemented security best practices, including authentication, authorization, and data encryption.

Collaborated with cross-functional teams to gather requirements, plan projects, and deliver robust software solutions.

Utilized version control systems like cPanel for code management. Troubleshoot, debugged, and resolved issues in a timely manner to ensure high availability and reliability of applications.
